

PANX

Powered by QSI

PANX (Demo), powered by QSI, is a Pan-African tool designed to drive infrastructure development across the continent. “Demo,” meaning axe, symbolizes a tool of execution, cutting through limitations and enabling progress. PANX serves as the digital platform where ideas are transformed into infrastructure, systems, and functioning enterprises.

Wordmark

The current shades of green and white are not aligned with those used in the logomark and should be adjusted for consistency. The font selection is also not final and should be refined to achieve a more polished and appropriate visual identity.

Logomark

The logomark is final in terms of structure and should not undergo any design alterations. The only required refinement is to ensure it is framed symmetrically within standard, well-proportioned dimensions suitable for different applications.

This version was developed using deliberate and precise proportional ratios across all its components. Any reproduction for higher resolution must strictly preserve these proportions. It should only be recreated if the tool being used guarantees no structural distortion or unintended modification.

Platform UI/UX Branding and Interaction Design

Objective

Design a modern, intuitive, and highly engaging user interface for PANX (Powered by QSI), inspired by high-adoption platforms such as TikTok, WhatsApp Business, Instagram, and Gemini.

The goal is to create a Pan-African digital experience that feels instantly familiar, easy to navigate, and clearly positions PANX as a leading platform for infrastructure development, innovation, and #

ecosystem interaction.

1. Entry Experience (Home Screen Structure)

Users should land directly on the Home screen upon opening the app.

Header (Top Section)

- Top Left: PANX
- Top Right: Powered by QSI

The header should sit within a subtle shaded or elevated background that complements the PANX logo and visually separates it from the main interface.

Search Bar

Position a search bar directly below the header.

Purpose:

- Search tools (modules)
- Search Pan-African ventures

2. Top Navigation (Swipe-Based)

Introduce a horizontal swipe navigation with three sections:

- Tools (represented by the PanX Logomark)
- PanX TV
- PanX Music

(Arranged left to right in this order)

3. Tools Section (Primary Interaction Layer)

Core Design Approach

Modules should be presented as chat-style interactive tiles, similar to contacts or conversations.

Each module must include:

- Icon (clean, professional)
- Module name
- Short, clear tagline
- Chat-like layout

Inspiration:

Core Tools

- **Vision Space**
Turn ideas into reality
- **Hyper Infrastructure** (currently Smart Infrastructure)
Design. Plan. Execute.
- **QSI Mobility**
Mobility built for purpose

Floating module/tool

- **QSI Logic** (currently Healing & Therapy)
Fix the mind that builds

Position:

- Bottom right corner (floating)

Behavior:

- Functions as an intelligent assistant
- Similar to WhatsApp Business AI

Inspiration:

Note: Put the QSI Logo inside the floating tool

4. PanX Enterprise Section

Place this section below the core tools.

Heading:

PanX Enterprise

Content Structure:

Display the following as concept-level entries:

- Placebo
- Heritage Flame
- FutureCraft
- Others

Note: These are not yet fully interactive. A separate task will define their operational systems.

Horizontal Scroll Layer

Within this section, include a horizontal scroll (carousel style) containing:

- Smart City Demonstrators
- Concepts and Innovations (QSI Concepts)

This should feel similar to:

- “People You May Know” (Facebook)
- Or content suggestion rows

5. PanX TV Section

Purpose

Video-based content platform

Content Types

- Project showcases
- Educational content

Inspiration

- TikTok
- Instagram

Content Rules

- Must be curated
- Must align with QSI values
- Must empower and uplift African users

6. Bottom Navigation Bar

Introduce a fixed navigation bar with five icons:

Home | Office | Lab | Inbox | Profiles

7. Profiles Section

Purpose

A structured network of people within the ecosystem

Categories:

Professionals (with QSI Portals)

- Engineers
- Architects
- Contractors
- Mentors

These are public profiles displayed as informative cards

- On click → full profile

Profile Structure:

- Functions like a Pan-African digital CV
- Focuses on practical contribution, not just credentials

Sovereign Minds (Verified)

- Marked with verification badges
- Represent thought leaders and mentors

Positioning:

A collective of decolonized thinkers driving mental transformation and intellectual leadership.

Capabilities:

- Can post educational and motivational content on their profile
- Content appears on their public profiles in horizontal scroll

8. Office Section (Admin Layer)

Purpose

Centralized admin workspace

Users can switch between multiple admin portals.

Eligible Users

- Engineers
- Architects
- Mentors
- Tutors
- System Architects
- Venture Operators
- Certified Content Creators
- Super Users

Access Logic

If NOT Verified:

Display message:

This space is reserved for verified QSI operators and contributors.

Provide guidance:

To access a dashboard, you must be certified within a QSI role.

Include CTA:

- Apply for Access

If Verified:

- Secure login prompt

- Access to personalized dashboard

Admin Capabilities

- Create and manage content
- Publish content
- Manage venture operations
- Respond to user requests
- Control module outputs

9. Inbox Section

Purpose

Communication layer of the platform

Functionality

Messaging between:

- Users and modules
- Users and operators
- System-assisted interactions

Supports

- Project discussions
- Clarifications
- Ongoing engagement

LAB section

Build. Learn. Apply.

1. Top Section

- Live Now (if active)
- Join Live button

2. Core Sections (Vertical Layout)

A. Digital Skills

Descriptor: Build with modern tools

Horizontal Scroll (Packages):

- Web Development
- App Development
- AI Tools
- Software Training

Action: View All

B. Physics

Descriptor: Understand the laws that govern systems

Horizontal Scroll (Packages):

- Classical Physics
- Quantum Physics

Action: View All

C. Healing and Wisdom

Descriptor: Fix the mind that builds

Horizontal Scroll: Healing & Therapy Packages

Action: View All

D. SENSOL

Descriptor: Bridging academia and industry through sustainable engineering solutions

Horizontal Scroll (Packages):

- Live Projects
- UZ Student Programs
- Infrastructure Innovation
- SENSOL Station Design

Action: View All

3. Floating Module (Persistent)

QSI Logic (Chat-Based Assistant)

Position:

- Bottom right (floating)

Function:

- Conversational guidance
- Recommends learning packages
- Assists users in navigating Lab

4. Content Format

- Video-based (primary)
- Live sessions
- Recorded sessions
- Short modules

5. Interaction

Users can:

- Watch and learn
- Join live sessions
- Explore categories
- Enter SENSOL projects
- Get guidance via QSI Logic

Launch Packaging

Design a clear and intuitive user flow suitable for platform demonstrations

- Ensure the platform is visually polished and presentation-ready
- Prepare screenshots and short walkthrough flows that can be used in presentations, promotional materials, and media demonstrations

This preparation will support the public introduction of QSI, including presentations and promotional activities in collaboration with media partners such as Danis Dube from ZiFM

Visual Direction

- Use clean, premium icons
- Maintain consistent typography and spacing
- Apply subtle African-inspired patterns where appropriate
- Ensure the interface feels:
 - Modern
 - Calm
 - Authoritative

Design Principle

Avoid clutter. Prioritize clarity, simplicity, and flow.
